Danish Parliament "Folketinget"

DIS Conference System

The Christiansborg Castle with its high, copper-roofed towers topped by three royal crowns, occupies a prominent position in the centre of Copenhagen. And as it houses the Danish Parliament "Folketinget", it also has a prominent part to play in the whole country.

DIS installed the first conference microphone system in the middle of the 1980s and in 1999 more up to date conference system was required. In 2004 DIS was chosen again to provide an upgraded system to match the newest technology trends. One of the crucial factors was a very good directional pickup pattern in combination with an advanced dynamic gain limiter control.

The central unit is in the control room together with PC monitors displaying the geographical room layout, audio mixers, audio recording systems and audio routing so that the press or the public can follow the speeches in other rooms.
